## Job 1110 - Light Weight Roofing System

Everything takes twice as long; doesn't it! A number of months ago a river front apartment complex was given the option of installing a light weight roofing system approved by their elected Body Corp Committee. The roofing system is manufactured by Makrolon and is twin fluted polycarbonate in construction.

Due to the original installation of the pergola system and it's bracing system what I thought would take a day to install took two and a half...

Wow, what a job; But, the results look fantastic and we have now completed 5 installations within the complex.

**The team did a great job.**

*The picture shows Steve happily appreciating his new roof.*

### **42-degree gable roof, an airless spray unit and our commitment**

It is not often that our Painters step off commercial and industrial projects to residential—this residential project however had proved a problem for other painting crews but not for Industrial Abseiling.

For six years Kelvin and Barbara had been trying to get painters to show-up to paint their roof and the result is fantastic. Go to <http://www.IndustrialAbseiling.com.au> and open the Projects tab , drop down to Current Projects to see the results at \$55 per man hour.

### **Calendar—Available dates**

**Life is consistent for Industrial Abseiling and for the balance we have between Administration, Revenue and Strategy I am very thankful. It is true, work smarter not harder (This lesson was hard for Me/Glenn). Industrial Abseiling has dates available last week in June and first in July for programmed work. For programmed work and now emergencies call Craig 0415876446.**

**\*Industrial Abseiling wish to offer customers discounted services. Qualified trades people are available from \$55 per hour for all your residential, commercial and industrial off-rope work. No call out fee!**
